

Machinist – Advanced Manufacturing Engineering (Apprenticeship Standard)

Each Apprenticeship Standard comprises the following areas:

- 1. Knowledge Element** – A Technical Certificate awarded by EAL which covers the theory element of the Apprenticeship.
- 2. Competence Element** – A National Vocational Qualification which demonstrates that the Apprentice can carry out the skills required for their role, assessed directly within the workplace or in centre by an assessor.
- 3. Functional Skills** (English & Maths Level 2) If the Apprentice doesn't already hold Maths and English qualifications at the level required for your Apprenticeship, they will study these as part of your off-the-job training. An Information & Technology (IT) qualification may also be required.
- 4. Transferable Skills** The Apprentice programme will also include training to help them develop Personal Learning and Thinking Skills (PLTS) and an understanding of their rights as an employee within the workplace.

You may wish for the Apprentice to develop enhanced skills for their job role; these specialised units will be taught alongside the main programme.

There are two main stages of an Apprenticeship Standard: the Foundation stage and the Development stage. Each stage has Knowledge (theory) and Competence (practical skills) elements.

The Foundation stage consists of a Level 2 qualification. The Development stage consists of a Level 3 qualification and also incorporates the employee behaviours listed.

Foundation Stage: Year 1

Apprentices will develop occupational / employee behaviours

Mandatory

Safety mindset; a problem-solving orientation; quality focus; personal responsibility and resilience; clear communicator; team player; applies lean manufacturing principles; adaptability; self-motivation; willingness to learn; commitment; dependability and responsibility; positive attitude; honesty and integrity.

**Foundation: Knowledge
Diploma in Machining Foundation
Knowledge (Technical Certificate)**

Qualification Code: 601/90/34/6

Mandatory

Working in an engineering environment; engineering techniques; engineering mathematics and science principles; fitting and assembly techniques; business improvement techniques; demonstrating personal accountability in an engineering environment; principles of turning and milling; Computer Numerical Control (CNC) milling techniques.

**Foundation: Competence
EAL Level 2 Diploma in Advanced
Manufacturing Engineering**

Qualification Code: 601/7179/0

Multiple Options

Complying with statutory regulations and organisational safety requirements; working efficiently and effectively in an engineering environment; using and communicating technical information; conducting business improvement activities; producing components using hand fitting techniques; preparing and using lathes for turning operations; preparing and using milling machines; preparing and using CNC milling machines; producing mechanical engineering drawings using a CAD system.

All Apprentices undertake a Foundation Phase Gateway Assessment before they progress onto Development stage.

Development Stage: Years 2-3

**Development: Knowledge
Level 3 Diploma in Machining
(Development Knowledge)**

Qualification Code: 603/1033/9

Multiple Options

Engineering and environmental health and safety; engineering communications; properties and applications of engineering materials; engineering mathematics; Computer Aided Drawing (CAD); advanced manufacturing techniques; CNC; programming/machining; mechanical engineering principles.

**Development: Competence
Level 3 Diploma in Advanced
Manufacturing and Engineering Machinist**

Qualification Code: 600/1034/0

Multiple Options

Complying with statutory regulations and organisational safety requirements; using and interpreting engineering data and documentation; working efficiently and effectively in advanced manufacturing and engineering; setting centre lathes; setting milling machines; machining components using milling machines; carrying out CNC machine tool programming; setting CNC milling machines; machining components using CNC milling machines.

On successful completion of the development element of the Apprenticeship; the Apprentice will also undertake an end point assessment at an approved assessment centre.

Are you looking to attract new talent or upskill your employees?

The Elite Centre for Manufacturing Skills' Apprenticeship programmes offer a number of benefits for employers.

All our specialist ECMS spokes have been designed by industry for industry. Access to state-of-the-art industrial standard equipment at each centre is complimented by the knowledge and expertise of our industry-specialist trainers. These experienced professionals, who are currently leading the way in the sector, will deliver training and assessment which will develop the vital skills needed in the next generation of employees.

As expert Apprenticeship providers, The Elite Centre for Manufacturing Skills (ECMS) can help employers throughout the process. Our dedicated Business Development Manager will guide you on how to recruit trainees and Apprentices, giving you all the support and information you need.

Our Business Development Manager will also work with you to construct a training programme tailored both to the needs of the sector and to your needs as a specific employer, focusing on the skills you need in your business.

All new Apprenticeships are now called Apprenticeship Standards; these are replacing the current Apprentice Frameworks.

What are the assessment methods?

There are no exams with the competence. Apprentices are assessed on their knowledge and skills on an on-going basis and will have to demonstrate that they can meet the required standards throughout their training. There will, however, be examinations for the Knowledge qualifications and functional skills.

All Apprentices will have an allocated Training Officer who will oversee training at work and at the ECMS. Their Training Officer will visit at least once every three months to review the Apprentice's progress and help them with any problems they might have.

How long is the course?

The Apprenticeship ends when the Apprentice has completed all of the necessary components of the course. This can take between two and four years.

Year 1 Apprentices will attend Dudley College or In-comm training for two days a week 8am-6pm and will work with their employer for the other three days a week. There are a variety of delivery models available depending on your needs eg: block release (eg: 1 week in 5) or full-time. Local accommodation is available.

Year 2-3/4 Apprentices will attend In-comm Training or Dudley College for one day per week (or block release).

ECMS Apprenticeship costs

- 16-18-year-olds are free for Non-Levy payers if you have less than 50 employees*
- 19+ up to £2,700 for an SME Non-Levy Payer**

Employers will pay 10% towards the cost of apprenticeship training and the Government will pay the rest (90%) eg: Apprenticeship standard current maximum fee £27,000.

If you are a Levy payer you will have to contribute up to £9,000 from your Levy account.

*If an employer recruits a 16-18-year-old Apprentice the employer may receive a £1,000 incentive payment. This will be paid over two equal instalments at 3 months and 12 months.

**19-24-year-old Care leavers and those on EHCP are fees exempt.
